## SUBJECTS OF VOLUME I

The table lists the parts of Volume I already published or in preparation.

Subtitle	Vol. I, Part
Aqueous Systems	1 (1980)
Supplement 1	1a (1981)
Supplement 2	1b (1988)
Organic Hydroxy Compounds	
Alcohols	2a (1977)
Alcohols and Phenols	2b (1978)
Supplement 1	2c (1982)
Supplement 2	2d (1982)
Supplement 3	2e (1988)
Supplement 4	2f (in prep.)
Aldehydes, Ketones, Ethers	3/4 (1979)
Supplement 1, Aldehydes, Ketones	3a (in prep.)
Supplement 1, Ethers	4a (in prep.)
Carboxylic Acids, Anhydrides, Esters	5 (1982)
Supplement 1	5a (in prep.)
Aliphatic Hydrocarbons C <sub>4</sub> -C <sub>6</sub>	6a (1980)
Aliphatic Hydrocarbons C <sub>7</sub> -C <sub>18</sub>	6b (1980)
Supplement 1	6c (1984)
Supplement 2	6d (in prep.)
Aromatic Hydrocarbons	7 (1980)
Supplement 1	7a (in prep.)
Halogen, Nitrogen, Sulfur and other Compounds	8 (1984)
Supplement 1	8a (in prep.)

## AUTHORS' PREFACE

Since 1984, when the two last volumes of our Vapor-Liquid Equilibrium Data Collection were published, a large quantity of new experimental data have been reported in the literature. These data were added to our Dortmund Data Bank (DDB). At the same time we extended our data bank to other thermodynamic mixture properties, i. e. liquid-liquid equilibria and heats of mixing, in collaboration with the group of Prof. A. Fredenslund (Lyngby, Denmark), and built up new data files for gas solubilities in collaboration with the group of Prof. H. Knapp (Berlin, Germany), excess heat capacities and acitivity coefficients at infinite dilution (this latter data file has been developed in collaboration with the groups of Prof. A. G. Medina (Porto, Portugal) and Prof. P. Alessi and Prof. I. Kikić (Trieste, Italy)).

All these activities are aimed at supplying the basis for the improvement and development of thermodynamic models of mixtures. Of course, we are also aware of the interest of users in industry and research who do not have access to the data in our data bank by network or in-house version. Therefore we are now starting the publication of a new series of supplements to the VLE Data Collection.

The present work will cover data for mixtures containing water, which were added to our data bank in the period from 1979, when Part 1a (first supplement to Part 1) was finished, up to 1987. Because of their great practical importance we have decided to include systems containing  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ,  $\text{NH}_3$  and  $\text{N}_2\text{H}_4$  in this part. Apart from this, we have made a few minor changes in the data tables. For example, for binary systems the activity coefficients at infinite dilution are given for each model equation. Recommended parameter values are now also given for systems containing carboxylic acids, taking into account vapor-phase non-ideality via the chemical theory. As for systems with more than two components, in general we refrained from tabulating the values of model parameters obtained by a fit to experimental multicomponent data. On the basis of our experience, parameters from binary and ternary data should be used in these cases.

On this occasion, we should like to thank all the colleagues who have sent us reprints and reports of new VLE data. We are also grateful to Dr. R. Eckermann and Mr. M. Groves from DECHEMA (Frankfurt/M) for their efforts in starting this new series of supplements.

From our team, the following members helped in the preparation of this supplement volume: Mrs. L. Kunzner, who was responsible for the input to the computer, Mrs. A. Nies, who did all the sorting, Mr. cand. ing. R. Treckmann, Mr. cand. chem. A. Thimm and Mrs. cand. ing. B. Urbanski. We should like to thank them for their diligence and enthusiasm.

Dortmund, October 1987

## PREFACE OF EDITORS

The DECHEMA Chemistry Data Series is concerned with the physical and thermodynamic property data of chemical compounds and their mixtures in the fluid state, in particular PVT and phase equilibrium data, heat capacity, enthalpy and entropy data and transport and interfacial tension data.

Thermophysical property information is required by those engaged in process design and development. Chemical engineering calculations demand accurate data and appropriate correlation methods which are often difficult to locate in the open literature. There is thus a pressing need for classified, critically evaluated and comprehensive experimental data, a need which this Series aims to meet.

DECHEMA gives authors, especially from universities, the opportunity to publish not only their theoretical results, but also their measured or compiled data, often a large amount, which would otherwise have never been published.

The research work of Prof. Gmehling, Prof. Onken and co-workers on vapor-liquid equilibria, which was partly supported by the Federal Ministry of Research and Technology and by DECHEMA, has been very fruitful; in particular, it led to an extension of the UNIFAC method. The authors have produced what is probably the largest collection of vapor-liquid equilibrium data available today. This data collection is being published as Volume 1 of the DECHEMA Chemistry Data Series. The appearance of Part 8 in 1984 marked the completion of Volume 1 for the time being. Since then, further data has become available, and will be published over the next few years.

We hope that this volume will give all those whose work involves vapor-liquid equilibrium a useful tool to help them solve their problems more easily and quickly than before.

Frankfurt/Main, July 1988

Dieter Behrens  
Reiner Eckermann
