INVITATION / PROGRAMME

February 9, 2015

DECHEMA, Frankfurt am Main, Germany

Workshop: Update on Legislative Regulations for Chemicals in China

SUPPORTED BY

VCI - Verband der Chemischen Industrie

CEPIC - The European Chemical Industry Council

INVITATION

INVITATION

Two years have already passed since the revised version of Decree 591 was published. We introduced the new laws and new regulations for chemical management in China in 2013.

How has it been in practice since then? Is it possible to register new or hazardous chemicals unobstructed in China? Have you heard of the “New Catalogue of Hazardous Chemicals”? Did you know that this will have direct and heavy impact on chemical manufacturers or importers? Did you know that companies based outside of China cannot register hazardous chemicals with NRCC? Are you ready for “New Blueprint of China REACH”? Are you aware of the new authority and changes?

In this workshop we concentrate not only on updated information on hazardous chemical management in China but also on practical works from the experts' point of view.

AICM members (Association of International Chemical Manufacturers) will give you an updated overview, the best interpretation of Chinese chemical regulation development and communication with SAWS-NRCC (State Administration of Work Safety – National Registration Center for Chemicals). CNCIC – China National Chemical Information Centre and CIRS – Chemical Inspection and Regulation Services will present case studies with questions like:

- how and where can you register your new chemicals and hazardous chemicals
- how are the procedures for registering pure chemicals, mixtures or polymers
- how is the cost calculation for a registration
- what are the differences between registrations in Shanghai, Beijing or Hangzhou.

The management concerning “food contact materials” is getting stricter. Experts will answer the question if there are any exemptions on food contact additives in China.

For a better understanding of this complex matter we will also have a panel discussion with experienced companies for Q & A.

This workshop is an absolute must for anyone producing chemicals in China or importing chemical substances into the country!

We are looking forward to welcoming you at DECHEMA House on 9th of February 2015!
