

E4Water

Eco-efficient management of industrial water

Informationen zum Projekt

[Homepage des Projektes](#)

The chemical industry provides the highest potential for increasing eco-efficiency in industrial water management. E4Water addresses crucial process industry needs, to overcome bottlenecks and barriers for an integrated and energy efficient water management.

The main objective is to develop, test and validate new integrated approaches, methodologies and process technologies for a more efficient and sustainable management of water in chemical industry with cross-fertilization possibilities to other industrial sectors.
