

ChemWater

Coordinating European Strategies in Chemical Process and Water Industry across Technology Platforms

Informationen zum Projekt

[Homepage des Projektes](#)

ChemWater is a project funded by the European Commission under the seventh Framework Programme. It addresses a key pan-European concern: the efficient management of water in process industry. ChemWater intends to coordinate European strategies on sustainable materials, processes and emerging technologies development. The project started in May 2011 and ends in October 2013.
