

RessWinn

Networking and transfer project for the BMBF funding measure "Resource-efficient Circular Economy - Innovative Product Cycles (ReziProK)"

Informationen zum Projekt

[Homepage des Projektes](#)

Within the framework of the BMBF funding measure "Resource-efficient Circular Economy - Innovative Product Cycles (ReziProK)", contributions to the implementation of a resource-efficient circular economy are to be made through research and development, by closing product cycles and providing the necessary business models, design concepts and digital technologies. The research results are then to be transferred as quickly as possible into economic practice and marketable products to strengthen companies in Germany as competitive providers of circular economy solutions. The networking and transfer project RessWinn supports the networking of the collaborative projects of the funding measure ReziProK as well as the utilization of the research results and their implementation in practice.
