

ReQ+

Scientific cross-cutting project for the BMBF funding measure "Resource-efficient urban districts for the future (RES:Z)"

Projektbeginn:

December 2018

Informationen zum Projekt

[Homepage des Projektes](#)

The BMBF funding measure "Resource Efficient Urban Districts for the Future (RES:Z)" promotes the research, development and testing of implementation-oriented concepts for water management, land use and material flow management in the area of urban districts as part of the flagship initiative Future City. The programme is flanked by the scientific cross-sectional project ReQ+, which aims to horizontally network, analyse and synthesise the research results from the collaborative projects of the RES:Z funding measure and represent their scientific contributions to the goals of the German Sustainability Strategy. ReQ+ thus supports the utilisation of the results, especially their implementation in municipal practice in cities and municipalities.
